

XCarrier Platform For any Industrial and Economic Sectors

- XCarrier is hosted in customer or external data centre. Oracle database technologies form the foundation of high-performance data processing.
- Master and transaction data is imported from defined source systems, temporarily stored in the XCarrier data lake, enriched with further data, completed, integrated and then processed.
- Structured data from all XCarrier databases is available at any time to all XCarrier applications and customer applications in a preprocessed form.

Telecom Applications

XCarrier provides all the necessary applications to ensure a sound operation of a wholesale telecom business.

Billing Settlement

XCarrier includes all commercial applications to generate a safe and positive business result.

Protection

XCarrier offers a range of efficient and effective security applications for secure voice operations.

Customer Added Value

XCarrier is the generic development and application platform for discerning companies and for many industries.

- It produces SOX-compliant, traceable and auditable security and data management
- XCarrier is ideal for regulated markets that place the highest demands on data management and data processing

XCarrier's modular structure enables both very generic and, at the same time, very specific applications

Go-to-market times for new and targeted services are significantly sped up by using the appropriate XCarrier Platform

Time interval	System performance – number of data records
One day	<ul style="list-style-type: none">• 2.4 billion data records• XCarrier as a system is not the limiting factor – Storage speed is the limiting factor, which is again a question of investment
One hour	> 100 million

- XCarrier provides lightning-fast, secure motion data processing and provision/display.
- Parallel systems can be easily added for peak performance (grid computing capable).

Swiss Made Software

The "Swiss Made Software" label is dedicated to promoting the Swiss software industry, both at home and abroad. It combines Swiss values such as quality, reliability and precision – especially in software development.
